## A revolutionary new approach to networking and collaboration in the physical sciences

Researchers now have a new tool for communicating with colleagues and identifying potential collaborators. **AIP UniPHY** is a first-of-its-kind professional social networking platform for physical scientists that is pre-populated with profiles of individual researchers based on their publication history.

**AIP UniPHY** enables physical scientists to connect with over 200,000 colleagues from more than 100 countries. They will discover the research each of these individuals has conducted and follow a web of connections showing each co-author with whom the investigator has worked. **AIP UniPHY** reveals with whom each of these co-authors has collaborated, as well.

Utilizing *Fingerprint* technology developed by Collexis Holdings, Inc., **AIP UniPHY** enables fast and accurate knowledge retrieval and empowers individuals to search for and locate documents, researchers, trends, and new discoveries more quickly, precisely, and thoroughly than ever before.
